Lenro — Online community of book-lovers

Involved in end to end product development. Also, developed the first version of its android app.

KyorLabs — Online Pathology Lab aggregator app

Involved in database design and Admin panel development having Role Based Access.

SIDE PROJECTS

I have created several applications as my hobby projects. Some of them are:

Webooly — *Get a Website from your Facebook page in 5 seconds flat.*

Developed this website to help Small businesses, music bands, cafes, bars, photographers and NGOs to get a website from their Facebook page. The tool fetches the company details, contact info, office locations and latest posts and sync them automatically making the use of a Content Management System redundant. User just needs to maintain their Facebook page, which they do anyway, and will get a dynamically updated website without the need of learning any content management system like Wordpress.

CryptoBuff — *Get latest news and rates of almost all the crypto currencies around the web!*

Developed this as a hobby project to solve my own problem of tracking bitcoin and etherium news to predict the possible rise or fall of crypto currency rates to invest my money at the right time.

WhereTheHellShouldIGo — *Nearby restaurants and bars finder.*

Developed as a hobby project in a weekend. The app detects your location and suggest you where to eat and/or drink.

FactsInNews — *Find what and Who is in News.*

The app collects news from several News portals like TimesOfIndia, BBC, New York Times etc. uses NLP tools to grab Entities in those news and then collects the relevant information from Wikipedia about the subject and presents them to the user in order of decreasing priority.

Songs Oye — *Download songs instantly.*

This web tool is written in PHP (Laravel). It provides a minimalistic beautiful interface to the user to search for the songs. The tool fetches suggestions instantly using the YouTube API. It then fetches the selected songs from the YouTube converts it into an audio file (.mp3 format) using ffmpeg. This conversion is done using a python script. The converted song is then made available to the user to download.

TECHNICAL SKILLS

I am well versed in several programming languages and frameworks. Moreover, I have a good Object Oriented and Design patterns knowledge. *'I love to write beautiful code that speaks'.*

Programming/Scripting Languages

PHP, Python, C, C++, Javascript, MySQL, Java

Frameworks and Libraries

Laravel, Bootstrap, Angular-4, Ionic, Spring MVC, jQuery
